# **Programming with barcodes**

---

The BARCODE PROGRAMMING feature gives the possibility to change the Scantech scanner settings without any tools or dismounting the scanner from the check stand.

In order to limit the size of this Configuration Guide, saving paper and our planet, this booklet contains the most important and most frequently used programming bar codes. If you require advanced functions; please request for the Configuration Guide Extended Version.

# **Changing Scanner Settings**

---

In order to change the scanner settings please follow the sequence below:

1. **OPEN** the scanner Programming Mode by scanning code 1.1.
2. **CHANGE SCANNER SETTINGS** by scanning any of the codes 2.1.x to 10.x.x.
3. **CLOSE** the scanner Programming Mode by scanning code 1.1.

Reading the **OPEN/CLOSE** code 1.1 gives a double tone beep (Low High).

An example:

For changing the baudrate to 4800 the following codes must be scanned successively:

1.1 -> 3.1.4 -> 1.1

After reading a valid barcode in Programming mode the scanner will give a High beep.

The scanner will generate a Low beep after receiving an unexpected code. Reading a code, for example a predefined ASCII character, directly after entering the Programming Mode, is not allowed and the scanner will not accept this data.

At any moment (in Programming Mode) you can scan code 1.2 to close the programming mode without update, or code 1.3 to return to default setting.

## **3.5 USB Communication**

## **3.5 USB SETTINGS**

For scanners with integrated USB-interface, you may activate this interface by connecting to appropriate communication cable.

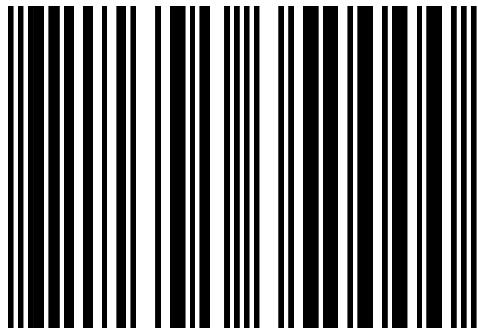

Depending on the firmware version ins the scanner, various protocol versions may be possible:

1. USB Keyboard Emulation (default)
2. USB IBM fixed POS scanner
3. USB IBM handheld scanner emulation
4. USB Comport emulation. Driver required, contact Scantech Technical Support.

**Important:** Reset (re-power) the scanner after changing one of the options listed above.

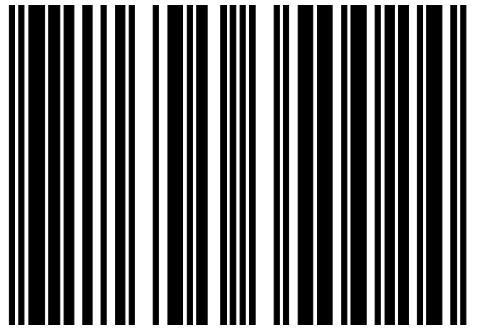

When using USB Keyboard Emulation, you can select different keyboard options using the programming codes from Chapter 3.4.

## **USB KEYBOARD EMULATION (DEFAULT)**

## **EAN/UPC ON + ADDON ON**

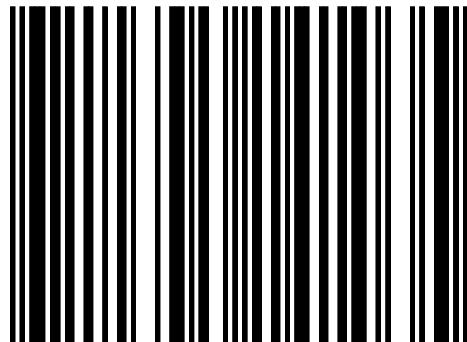

### **4.1.3**

**Important:** Add-On codes are optional. The scanner will accept bar codes with or without Add-On.

If the scanner reads an EAN/UPC code without Add-On, the scanner will look for a certain extra time for an Add-On.

If this time has elapsed and no Add-On is found, the scanner will just send the EAN/UPC main code.

**EAN/UPC + ADDON MANDATORY ON  
(FOR 378/379/414/419/434/439/529/977)**

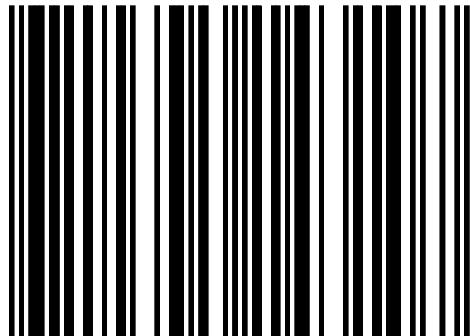

**4.1.5**

**Important:** After scanning this code, EAN-13 bar codes starting with 378, 379, 414, 419, 434, 439, 529 or 977 will only be accepted including Add-On. If no Add-On has been found, the bar code will not be accepted.

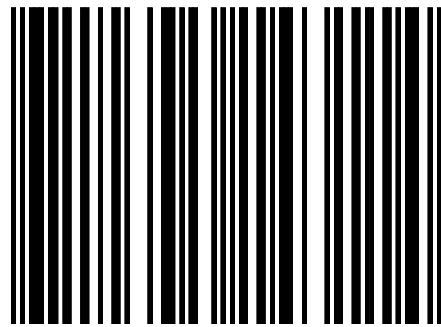

Bar codes starting with different characters are accepted with or without Add-On.

The scanner can be programmed to output bar code data according to the following format:

[PREAMBLE STRING] [BAR CODE DATA]

The preamble string is limited to a maximum length of 3 characters. Use the chart on the next page to program the preamble string.

## **Example:**

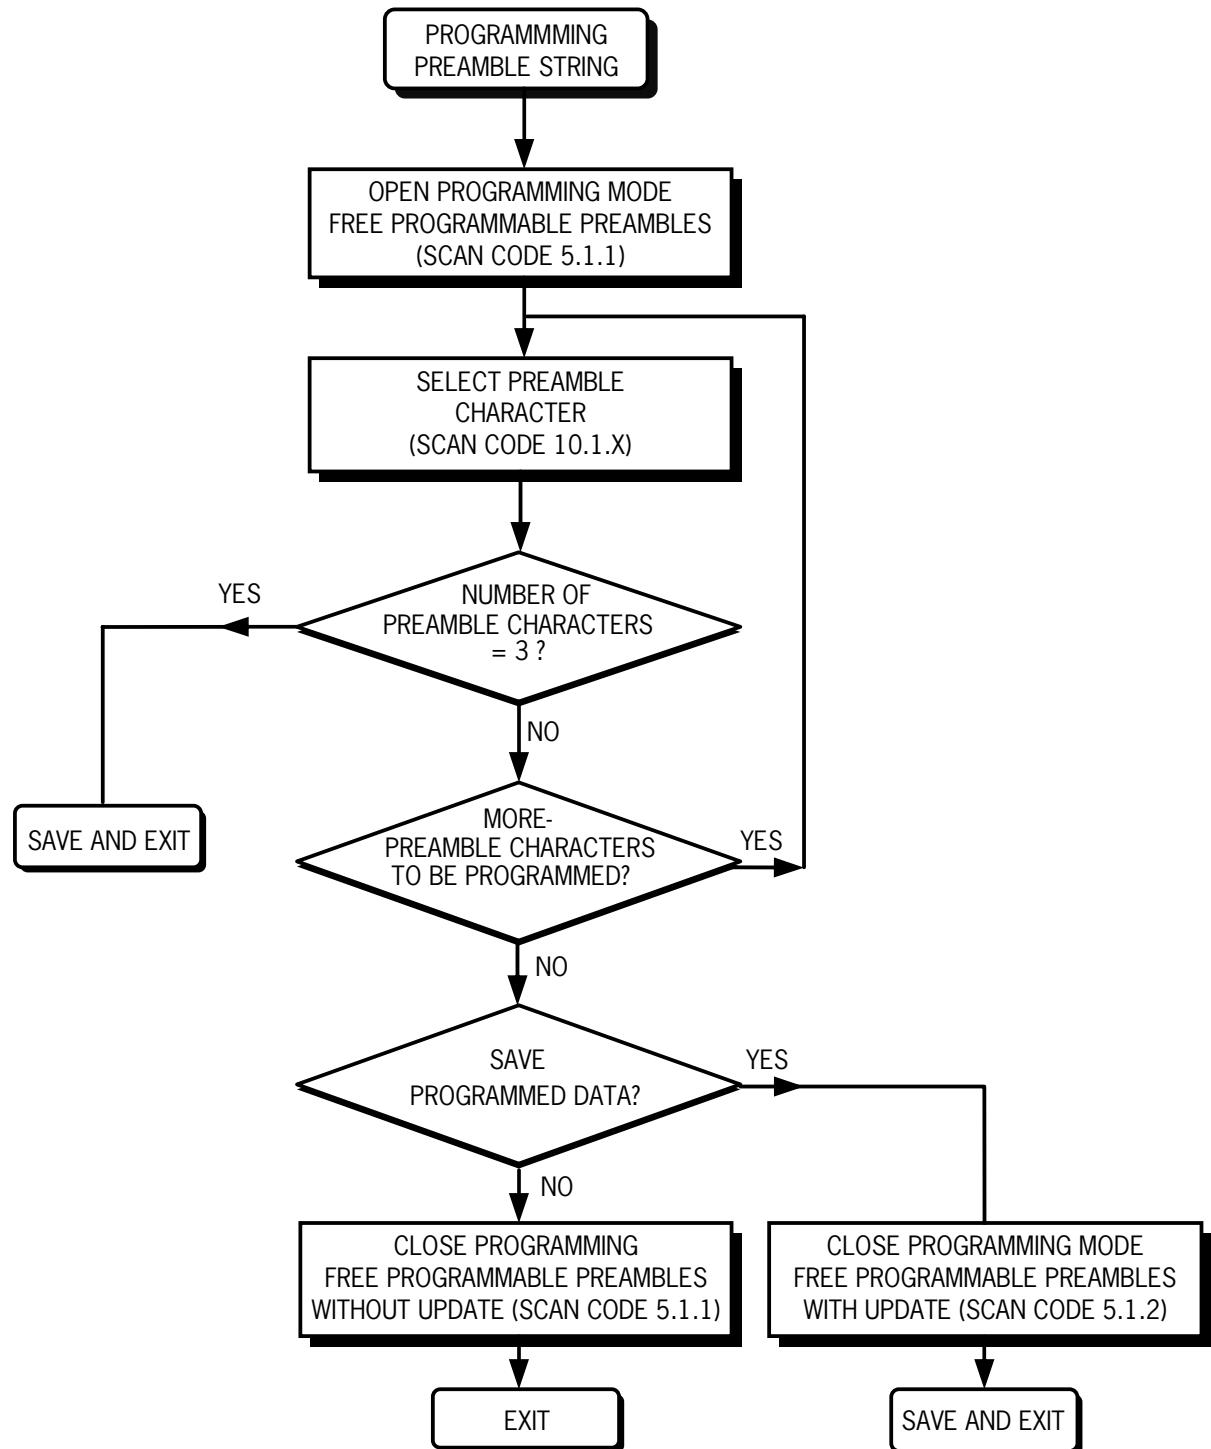

To send a <STX> in front of the bar code, scan successively (while in Programming Mode)

- 5.1.1 Free programmable preambles: Open Programming mode
- 10.1.2 <STX>
- 5.1.2 Free programmable preambles: Close programming mode with update

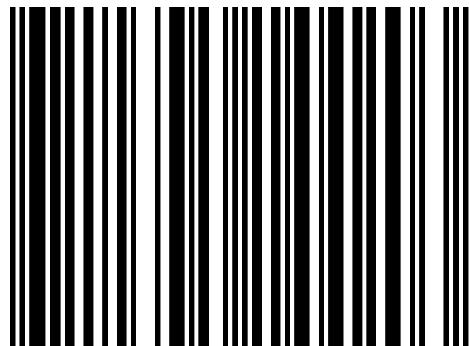

As a result, the scanner will give the following bar code data output:

A code identifier is a data string, giving information to the host system concerning the bar code type that has been read. After scanning code 5.3.1. the scanner is programmed to transmit data according to the following format:

CODE	CODE IDENTIFIER	MESSAGE FORMAT
EAN13	F	D1 - D13
EAN8	FF	D1 - D8
UPCA	A	D1 - D12
UPCE	E	0 D1 - D6
